

Tower Avenue Area Sewer Rehabilitation Project

Project Overview

The scope of the project includes lining of mainline sewers and sewer house connections, sewer point repairs, rehabilitation of sewer manholes and reconnection of catch basins to a stormwater system. Sewer lining was performed to help remove infiltration (groundwater that seeps into the pipe through cracks or holes) and improve the structural integrity of the pipe and renew the pipe's remaining life. It is a "no-dig" type of construction thereby minimizing the impact to property owners and residents. The project included 359 properties and was substantially completed in December 2024 as part of the MDC's Integrated Plan with CT DEEP.

\$6.9M project cost

359 properties

39% of workforce hours were
Hartford residents

Project Outreach

Project outreach by MDC staff and contractors was key to keeping residents informed throughout the construction process for both public right of way and private property improvements. This constant communication was important not just for the construction improvements but also the restoration of the road, sidewalks, lawns and tree planting.

Work Completed

- **1.8 miles** of sewer main lined
- **300** sewer laterals/private house connections lined (2 miles)
- **58** sewer point repairs made
- **71** manholes lined
